MOSBY'S

**NURSINGCONSULT**

THE LATEST KNOWLEDGE FOR THE GREATEST CARE.

护理人员专用数据库  
[www.NursingConsult.com](http://www.NursingConsult.com)

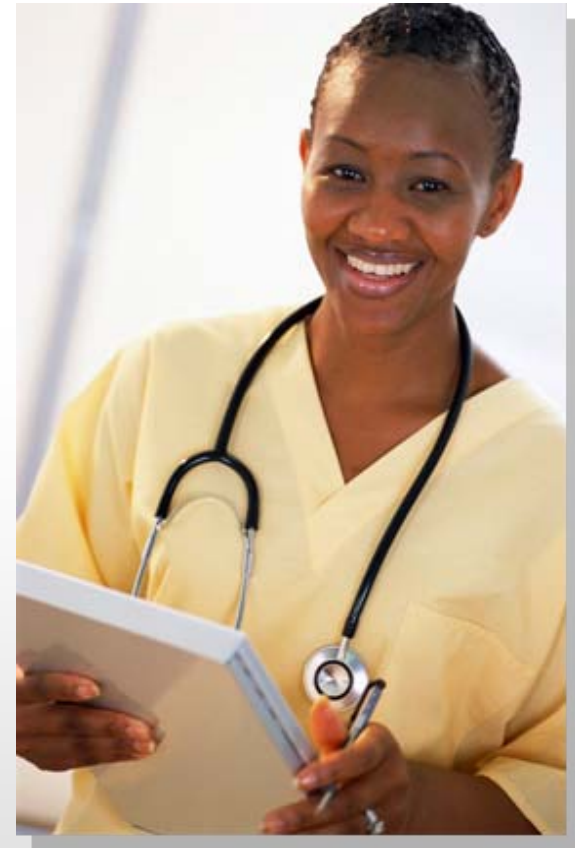

2009-04-22

---

# 什么是 Mosby's Nursing Consult?

为护理人员提供全面的、权威的信息，帮助护理人员达到优质的医疗服务：

- ✓ 快速找到临床解决方案
- ✓ 病人教育
- ✓ 获取第一手护理新知
- ✓ 改善护理质量

# 谁创造了 Mosby's Nursing Consult?

## 由**ELSEVIER**出品

- 全球护理资讯的领导者

- 两大出版品牌  MOSBY  SAUNDERS

## 由以下人员联合开发

- 由权威的护理医师、教育者及研究者组成的顾问委员会

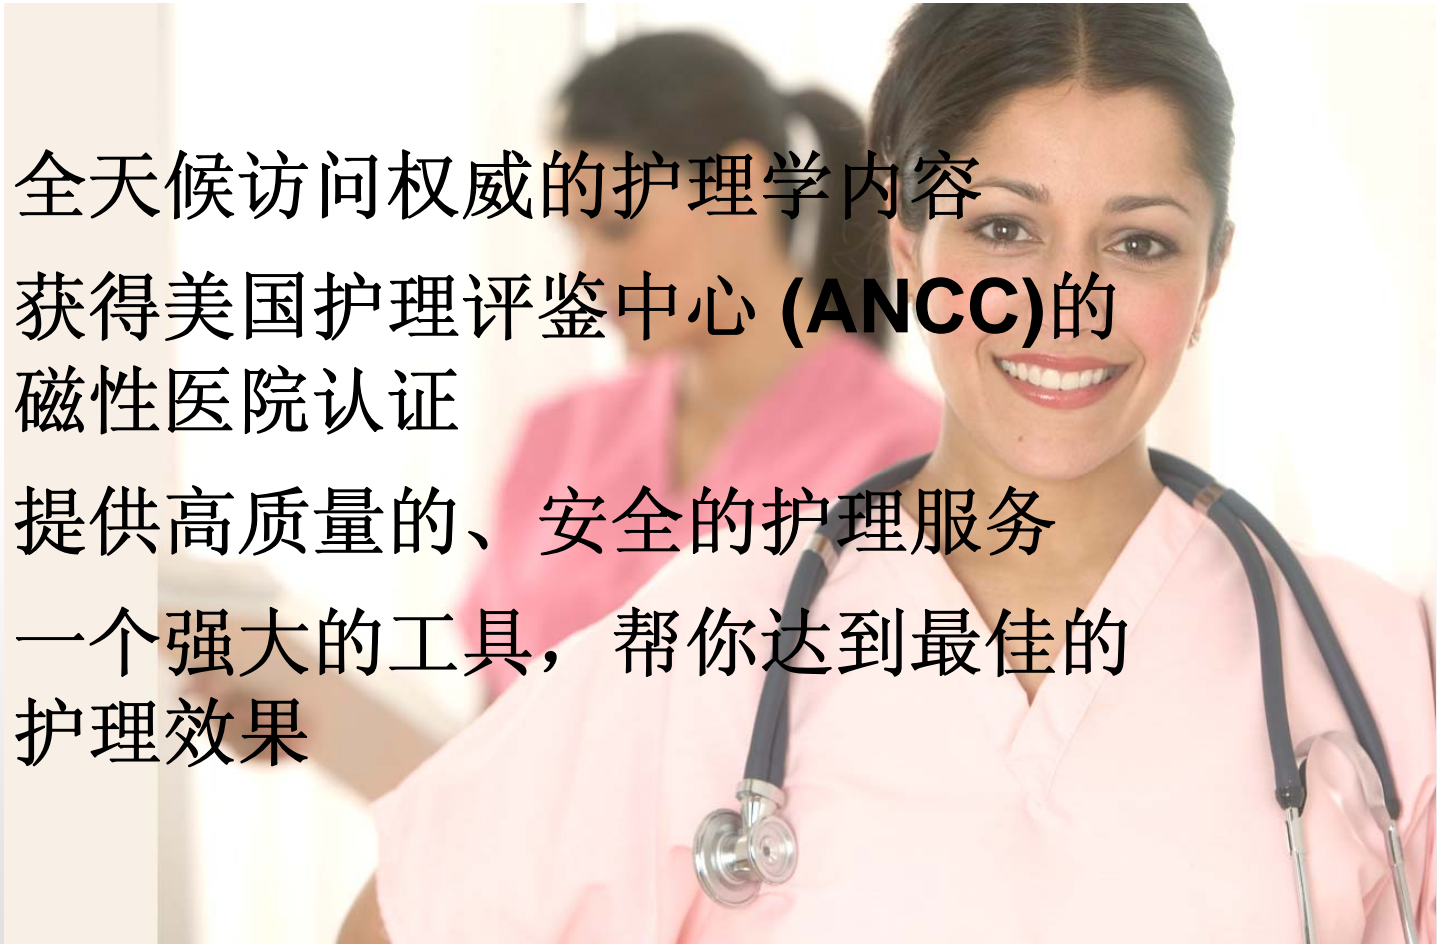

# 谁应该使用 Mosby's Nursing Consult?

- 护士
- 职业发展人员
- 护理学教育者
- 护理信息学者
- 论日计酬的流动护士
- 医学及护理学图书馆馆员
- 护理管理人员

# 为什么 使用 Mosby's Nursing Consult?

- 全天候访问权威的护理学内容
- 获得美国护理评鉴中心 (ANCC) 的磁性医院认证
- 提供高质量的、安全的护理服务
- 一个强大的工具，帮你达到最佳的护理效果

# 我们怎样保证信息的有效性?

爱思唯尔护理学顾问委员会为MNC提供战略指导和发展方向

**Mary F. Clarke, RN, PhD, BC**  
Director of Nursing Practice, Research and Innovation  
Genesis Medical Center

**Dolores Jones, RN, EdD, CPNP, CAE**  
Director of Practice, Education and Research  
National Association of Pediatric Nurse Practitioners

**Shirley E. Otto, RN, MSN, CRNI, OCN, AOCN**  
Nurse Consultant

**Chris Pasero, RN,C, MS, FAAN**  
Pain Management Educator and Clinical Consultant

**Lynelle N.B. Pierce, RN, MS, CCRN**  
Clinical Nurse Specialist, Critical Care  
University of Kansas Hospital

**Jean A. Proehl, RN, MN, CEN, CCRN, FAEN**  
Emergency Clinical Nurse Specialist  
Dartmouth-Hitchcock Medical Center

**Belinda E. Puetz, RN, PhD**  
Nurse Consultant

**Diane J. Skiba, PhD, FAAN, FACMI**  
Professor, University of Colorado at Denver Health Sciences Center

**Mary Lou Sole, RN, PhD, CCNS, FAAN**  
Professor, University of Central Florida School of Nursing

**Mary Crabtree Tonges, RN, PhD, FAAN**  
Sr. Vice President and Chief Nursing Officer  
University of North Carolina Hospitals

**Jean Zehler, RN, MSE, BC, CNA**  
Magnet Coordinator

# Mosby's Nursing Consult 概览

下面将为您概括说明  
MNC 的主要内容和功能

# 概览: 包括哪些内容?

## 参考书

- 31 本权威的护理学参考书
- 5,000 幅可检索的参考书图片

## 期刊

- 27份全文期刊和2份北美临床杂志
- 检索范围涵盖MEDLINE©
- Mosby's Nursing Index – 护理学及健康相关的期刊摘要和索引
- 提供OpenURL, 链接至机构订阅的其他文献资源

## 循证护理学专论

- 27 份详细的专论\*
- 专论每月递增

## 患者教育

- 8000 份可定制的患者手册  
(1/3 同时提供西班牙语版本)

\*截至2008年3月

# 概览:包括哪些内容?

---

## 诊疗指南

- 来自约90个机构的200份护理学诊疗指南和声明

## 临床新知

- 50份经同行评鉴的最佳实践文章

## 药物信息

- 超过2,700份药物专论, 涵盖150,000种药物
- 11种药物计算器

## 辞典

- Mosby医学、护理及健康辞典, 第7版

# 概览:包括哪些内容?

---

## PDA 内容

- 药物新知
- 护理学新闻
- 药物计算器
- 临床新知摘要

## 护理学新闻

- 每日新闻
- RSS 新闻
- 两月一期的电子邮件新闻，扼要介绍MNC的最新新闻及更新内容

# Mosby's Nursing Consult 深入了解

# 深入了解: 非IP授权用户登陆

[www.NursingConsult.com](http://www.NursingConsult.com)

The screenshot shows the Mosby's Nursing Consult website interface. At the top, there is a navigation menu with links for Home, Evidence-Based Nursing, Books, Journals, Drugs, Practice Guidelines, Patient Education, Clinical Updates, and News. Below the menu is a search bar with options for 'Entire Site', 'For', 'With Any', 'Focus', and 'Go'. A 'Product Preview Take a Look Around' button is located in the top right corner. The main content area is divided into two columns. The left column contains a 'Member Log-on' section with fields for 'User Name' and 'Password', a 'Log On' button, and a link for 'Athens User: Click here to login'. Below this is a 'Membership' section with information about a 14-day free trial and group/institutional license subscriptions. The right column features a large image of a smiling nurse in scrubs with a stethoscope. To the left of the image is the text 'Mosby's Nursing Consult helps nurses answer clinical questions and stay abreast of recent developments by integrating:' followed by a bulleted list of features: 31 leading reference books, 25 journals and 2 Clinics, 8,000 customizable patient handouts, Comprehensive drug information, Evidence-Based nursing monographs, Practice Guidelines, 5,000 searchable book images, MEDLINE and Mosby's Nursing Index, "Best Practice" Clinical Updates, Nursing News, Dictionary, and PDA downloads. At the bottom of the right column is a link for 'Want to Learn More? Take a Guided Tour'. The footer contains links for 'About Mosby's Nursing Consult', 'Contact Us', 'Terms and Conditions', and 'Privacy Policy', along with copyright information for Elsevier Inc. in 2008.

**Epilepsy**  
 December 26, 2007  
 Contributed by Susan Tocco, RN, MSN, CNRN, CCRNS

**Clinical Question:** Based on advances in the management of epilepsy, what nursing implications can be derived for the provision of effective quality patient care?

**Introduction to Clinical Health Problem**

**Pathophysiology**

- A seizure is a discrete event in which there is an abnormal electrical discharge in the brain that causes an alteration in cerebral function.
- The classification of seizures involve motor, somatosensory, autonomic, or psychic manifestations and originate in a focal region of one cerebral hemisphere.
  - Partial partial—no impairment in level of consciousness (LOC)
    - Simple partial—impairment in level of consciousness
    - Complex partial—impairment in level of consciousness
  - Generalized seizures originate in both cerebral hemispheres and cause an immediate impairment in LOC
    - Secondary generalized—begins with a clonic or myoclonic phase
    - Tonic—sustained increased in muscle tone
    - Clonic—jerking limb movements
    - Tonic-clonic—formally known as grand mal, begins with a tonic phase, followed by a clonic phase
    - Myoclonic—sudden muscle contractions
    - Atonic—"drop attacks," acute loss of consciousness
    - Absence—sudden onset of impaired consciousness
    - With generalized seizures: postictally, presence of lethargy or sleep, incontinence of urine and feces, no memory of seizure activity
- Status epilepticus occurs when seizure activity persists for longer than 5 minutes or when the patient has seizures without returning to baseline LOC.
- Epilepsy refers to recurrent seizures caused by biochemical, anatomic, and physiologic changes.
- Epilepsy can be caused by many conditions including traumatic brain injury, tumor, cerebrovascular disease, anoxia, central nervous system (CNS) infections. However, the majority of cases are idiopathic. The incidence of epilepsy increases with age.

**Current Practice**

The current practice guidelines for the diagnosis and treatment of epilepsy in adults can be found on the [Scottish Intercollegiate Guidelines Network \(SIGN\)](#).

An accurate history from the patient and witnesses to the event is the foundation for diagnosis. Electroencephalography (EEG) and video EEG that may occur in an epilepsy monitoring unit (EMU) can be used to diagnose and to identify the location of the seizure focus. Magnetic resonance imaging (MRI) is the imaging modality of choice for detecting causative lesions or other brain abnormalities.<sup>2</sup>

Antiepileptic medications (AEDs) are used to treat confirmed epilepsy. Initiation of AED therapy is based on an individual's seizure activity, the cause of seizure activity, the risk of injury related to seizure activity, the risk of recurrent seizure activity, and the impact of seizures on the individual's activities of daily living (ADLs).<sup>2</sup>

Pneumonia  
 January 17, 2008  
 Contributed by Melanie Atkinson, RN, MSN, CCRN

Clinical Question: *Based on advances in the management of bacterial nursing implications can be derived for the provision of patient care?*

Introduction to Clinical Health Problem

Pathophysiology

- The lungs are exposed to microorganisms and particulate matter that are present in the upper airways and transported to the lower respiratory tract by microaspiration.
- The lower airways usually remain sterile when a person has normal host defense mechanisms.
- The development of pneumonia indicates a defect in the host defenses, exposure to a virulent microorganism, an overwhelming infection, macroaspiration, or spread from a distant site.<sup>1-2</sup>
- Pneumonia is usually caused by bacteria, viruses, or fungi. Pneumonia can be further classified as community-acquired pneumonia (CAP) or health care-associated pneumonia (HCAP).
  - HCAP occurs among:
    - Patients hospitalized in an acute care hospital 2 or more days within 90 days of the infection
    - Those who reside in a nursing home or long-term care facility
    - Those who have received intravenous (IV) antibiotic therapy within the last 90 days, chemotherapy, immunosuppression treatment in the past 3 months, or wound care within the past 30 days of the current infection
    - Those with severe chronic obstructive pulmonary disease (COPD)
    - Those who have been exposed to child care or who visited a long-term care facility
  - HCAP includes hospital-acquired pneumonia (HAP) and ventilator-associated pneumonia that occurs more than 48 hours after admission to the hospital.

Evidence-Based Nursing Recommendations

Assessment

- Assess vital signs, for fever, hypothermia, tachypnea, or tachycardia.
- Assess respiratory status including cough, sputum production, dyspnea, chest pain, pulmonary crackles, cyanosis, intercostal retractions, nasal flaring, and dullness to percussion.
- Assess gas exchange by using saturated oxygen (SpO<sub>2</sub>) levels.
- Determine severity of CAP using The Pneumonia Severity Index (PSI) and the CURB-65 (Tealy et al.).
- Assess for complications of pneumonia such as pleural effusion and empyema.
- Assess for signs and symptoms of congestive heart failure (de Souza et al.).
- Assess intake and output as prescribed.

Data Analysis

- Monitor labs and diagnostic studies for leukopenia or leukocytosis and consolidation on chest x-ray.
- Monitor sputum culture and blood culture results as prescribed (Bozzek et al.).

NOC/NIC

Nursing Outcomes (NOC)	Nursing Interventions (NIC)
Respiratory Status: Gas Exchange	Acid-Base Management
Respiratory Status: Ventilation	Airway Management
Respiratory Status: Airway Patency	Airway Suctioning
	Cough Enhancement
	Mechanical Ventilation
	Mechanical Ventilatory Weaning
	Medication Administration
	Oxygen Therapy
	Respiratory Monitoring

### ABSTRACT

TRAUMA IS THE LEADING CAUSE OF DEATH for people younger than age 45 in the United States. To help prevent death or disability, critically injured trauma patients must reach definitive care within the "golden hour."

OFTEN, THE PERIOPERATIVE TEAM has no more than 10 minutes to prepare the room before a patient who has suffered multiple, critical, traumatic injuries is rushed into the OR.

FOR THE TRAUMA PATIENTS SAFETY, the perioperative team must be diligent and use creative measures to efficiently ensure that all surgical counts are completed. Foregoing surgical counts places the trauma patient at an increased risk for unintentionally retained foreign objects.

In the United States, trauma is the leading cause of death for persons younger than 45 years of age. Trauma is defined as a severe physical injury that creates a risk of death or significant disability and may be caused by an external force or risk. According to the National Trauma Data Bank's annual report released in January 2006, the greatest number of trauma deaths are caused by injuries related to motor vehicle traffic accidents. Falls and firearms are the second and third most common causes of trauma deaths. Mortality is not the only consequence of trauma. For every trauma victim who dies, at least six trauma victims are

全文文章

and allied health staff members available to provide care for the critically injured trauma patient 24 hours a day, seven days a week. Level I is the highest designation a hospital can receive from the American College of Surgeons. To provide specialized care, a level I trauma center must have appropriate equipment and facilities. Traumas may occur anywhere, anytime, and level I trauma centers must be prepared at all times.

The time between the announcement of an incoming emergent trauma until the patient arrives in the OR may be only a matter of minutes in a level I trauma center. The patient may come from the emergency department (ED) or from the helipad directly to the OR. Often, the perioperative team has no more than 10 minutes to prepare the room before the trauma team is crashing through the door with a patient who has suffered multiple, critical, traumatic injuries.

Completing the initial surgical counts before the trauma patient enters the OR is a major challenge.

### Mechanism of Action:

•**Acetaminophen:** The exact mechanism of analgesia is unknown. Acetaminophen acts primarily in the CNS and increases the pain threshold by inhibiting cyclooxygenase, an enzyme involved in prostaglandin (PG) synthesis. Acetaminophen inhibits both isoforms of central cyclooxygenase, COX-1 and COX-2. Acetaminophen does not inhibit PG synthesis in peripheral tissues, which is the reason for its lack of peripheral anti-inflammatory effects. The antipyretic activity of acetaminophen is exerted by blocking the effects of endogenous pyrogen on the hypothalamic temperature-regulating center by inhibiting PG synthesis. Heat is dissipated by vasodilatation, increased peripheral blood flow, and sweating.

•**Aspirin, ASA:** The activity of aspirin is due to its ability to inhibit cyclooxygenase (COX). Cyclooxygenase is responsible for the conversion of arachidonic acid to prostaglandin G<sub>2</sub> (PGG<sub>2</sub>), the first step in prostaglandin synthesis. *In vivo*, aspirin is hydrolyzed to salicylic acid and acetate.

## What is ear congestion?

If your child has ear congestion, he will probably feel:

- like his hearing is suddenly muffled
- crackling or popping noises in the ear
- a stuffy, full sensation in the ear

Your child will usually not have ear pain except in cases related to airplane travel.

Ear congestion usually lasts for a few hours or a few days at most. It may come and go. If the ear congestion is an ear infection.

## What is the cause?

The most common cause of ear congestion is fluid in the middle ear due to a cold, hay fever, or over-vigorous increases in barometric pressure, which occur in descent from mountain driving or airplane travel, also cause e

## How can I take care of my child?

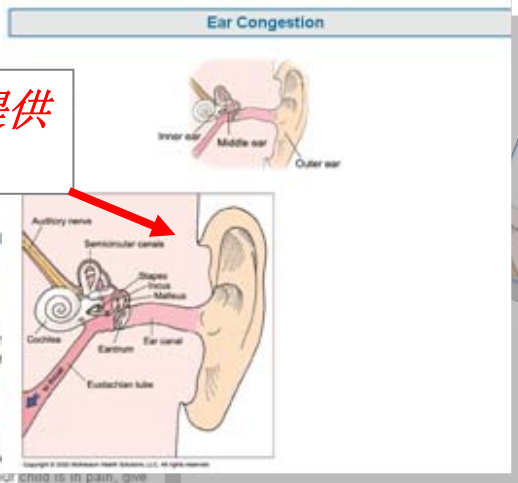

- **Treatment** Have your child chew gum, yawn frequently, and swallow while the nose is pinched closed. If the ear canal from a recent shower or swim, help drain it with gravity by turning the side of the head down earlobe in different directions. If he has hay fever he should also take his antihistamine medication. If your child is in pain, give acetaminophen or ibuprofen. It's OK for your child to swim.
- **Prevention of ear congestion due to altitude change** Have your child repeatedly "pop" the ears by yawning or swallowing during the 15 to 30 minutes of descent in an airplane. If this fails, your child should try to blow his nose against closed nostrils. A baby can be given water to drink or a pacifier to suck on. The child should not sleep during descent. Children with that continue to have this problem should take an oral antihistamine and use a long-acting decongestant nasal spray 1 hour before travel. If severe pain occurs despite these precautions, ask the flight attendant for a hot towel to place tightly over the opening of the ear (the heat will expand the air in the middle ear and relieve the pressure on the eardrum).

## When should I call my child's healthcare provider?

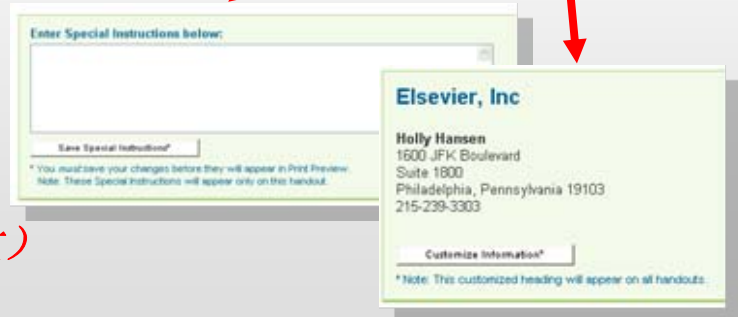

Call during office hours if:

- The ear congestion lasts more than 2 days.
- Ear pain develops.
- You have other concerns or questions.

### Stroke Assessment and Treatment: Timeliness Is Key

By Sharon Dorsey, RN, MSN, CCRN

#### Abstract

This article refreshes your knowledge of the causes and types of stroke, the risk factors and lifestyle modifications needed to reduce risk, and the assessment and treatment priorities to improve clinical outcomes of patients with stroke. The National Institutes of Health Stroke Scale (NIHSS) is highlighted as a valuable assessment tool, and healthcare providers are encouraged to "go with the Guidelines" of the American Stroke Association/American Heart Association.

##### Related Information

#### Stroke and TIA: Incidence and Prevalence

Each year approximately 700,000 Americans suffer a cerebrovascular accident (CVA) or brain attack, and about 165,000 die.<sup>1</sup> Also called stroke, CVA is the third leading cause of death in the United States and the leading cause of long-term disability. Stroke increases with age, doubling every 10 years after age 55. Men have a greater chance of stroke than women, and die from strokes than men do. African Americans have a higher risk for stroke—almost twice the risk of first-ever stroke than other races. They are also likely to suffer greater disability.<sup>2</sup>

A transient ischemic attack (TIA), also called a silent stroke, is differentiated from stroke by its duration—usually only a few minutes. TIA is an acute episode of temporary and focal loss of cerebral function with vascular (occlusive) origin. Onset of TIAs is rapid, and symptoms reach their maximum manifestation in fewer than 5 minutes (usually less than 1 minute). TIA symptoms are similar to those of stroke, including numbness or weakness in the face, arm, or leg, especially on one side of the body; confusion or difficulty in talking
